

Micro Merchant Systems Robocall Mitigation Program

- Micro Merchant Systems (MMS) is a provider of pharmacy management software.
- MMS customers sign a contract that bans using our products to spam via email, SMS, or voice.
- We log all messages and calls with timestamp, length (if relevant), and the sender's initials.
- MMS' products do not have auto-dialer functionality and do not integrate with external platforms that do so.
- MMS leverages Bandwidth's STIR/SHAKEN-compliant call signing for all outbound voice calls from our products.
