

Robocall Mitigation Program

*We are a non-facilities based Small Voice Provider with customers in Texas.

*We are mitigating outbound robocalls through IP whitelisting and end-to-end encryption (DOD Approved).

*We are mitigating inbound robocalls through the “National Do Not Call” registry and Skyetel Spam filtering features.

*No device can commission a call on my network without being known and installed by me. All customers are known personally, on a first name basis, by the owner of PetroNet Works.

*I trust Skyetel as the sole carrier for my network to provide Stir/Shaken attestation, tokens, and signatory on all calls.

*No PBX or end-point phone faces the internet directly, but must route through stand-alone firewalls that discard any irrelevant traffic not declared by the white-list.

*We are dedicated to responding to any trace-back or investigations presented to us by jurisdictional law enforcement, the Commission, and the Industry Consortium and are committed to cooperating fully and in a timely manner.

*No analytics system is required with this topology, with effective ip-whitelisting at the packet-level, no Deep Packet Inspection is performed and only verified end-users can submit calls.

*As of May 2024, PetroNet Works has not been the subject of any formal commission by Law Enforcement, any regulatory agency, or other commission as a result of any suspected wrong-doing or otherwise, and especially not in the last two years.

These statements are true and correct, describing the function of the network of PetroNet Works in its current state.

President, CEO.
Conoley H. Olsen

A handwritten signature in black ink, appearing to read 'Conoley H. Olsen', with a long horizontal flourish extending to the right.
