Key Personnel:

- Ideal Kamerolli, Managing Director

Robocall Mitigation Program Description

Robocall Mitigation Program Description

ILLYSOFT has implemented a robust robocall mitigation strategy to prevent unlawful robocalls. Our primary method involves using a voice CAPTCHA system. If we detect a high number of calls within a short period, we require the caller to complete a voice CAPTCHA. The system uses different AI voices to speak a code that the caller must type to proceed with the call. This ensures that only legitimate users can make calls, effectively blocking automated robocalls.
