

Robocall Mitigation Program for

All8Series, LLC

June 13, 2024

In accordance with the Federal Communications Commission requirement for voice providers to provide and upload their Robocall Mitigation Plan All8Series, LLC has provided the details of its process and/or implementations below.

STIR/SHAKEN Implementation

All8Series, LLC has fully implemented a STIR/SHAKEN solution in its network and is committed to responding to traceback requests within 24 hours from the Federal Communications Commission, law enforcement, and the Industry Traceback Group.

Robocall Mitigation Plan

All8Series, LLC has a Robocall Mitigation Program in place for its network. Specifically, All8Series is taking the following steps to avoid originating illegal robocalls and other suspected malicious voice traffic on its network in addition to its STIR/SHAKEN implementation:

1. All traffic originated on our services requires specific entries built on our switch. Without these entries no calls can be made, which substantially limits the ability for illegal robocalls and other malicious traffic to originate on our network undetected.
2. All8Series requires its customers to acknowledge that All8Series's network shall not be used for the origination of illegal robocalls.
 - a. Business customers acquiring new services are required to sign an agreement that includes terms of service that prohibit illegal robocalls, identify what All8Series deems proper use of telecom services, and what the penalties are for breaking terms of service, including suspension and/or disconnection of service for violations as permitted by applicable law.
 - b. All8Series's website has been updated to include terms of service that prohibit the origination of illegal robocalls, identify what All8Series deems proper use of telecom services, and penalties for breaking terms of service, including suspension and/or disconnection of service for violations as permitted by applicable law.
3. All8Series continuously monitors outbound calling over its network for any spikes in traffic, origination errors, or termination errors.

Responding to Traceback Requests and Cooperation with State and Federal Regulators

All8Series commits to responding to call traceback requests from the FCC, law enforcement,

and the industry traceback consortium. All8Series also will cooperate with the FCC, law enforcement, and the consortium to investigate and end any illegal robocalls found to be

originating on All8Series's network.
