VoIP Switch Manager or VSM

What is VoipSwitch Manager or VSM

What programs does the VoIP Switch Platform have?

VoipSwitch Manager is the main application of the VoIPSwitch package. This tool allows the VoIP platform administrator to manage and monitor all the performance of the VSM options such as managing customer accounts, rates, dialing plans and many alternatives available in this special VoIP software.

VoIP Switch Manager

The VSM panel can be divided into 3 parts:

- Left Menu Panel:

Main VSM menu from which different modules can be selected;

- Central Information Panel:

This window lists all errors that occurred during the VSM session,

- Main Window:

The options available after choosing an item from the left menu pane are displayed.

There is also a top menu available from which the different parts of the VSM (such as the left menu pane items, database configuration and VSM window management) are accessible.

In addition, there is a context menu that allows changing the database settings, searching for clients and turning on/off the Information Center and left menu panels.

Basically, in the VSM there are all the indispensable working tools to offer VoIP Telephony service.
