

Avtal LTD Robocall Mitigation Program

Avtal LTD, based in Israel, is a VoIP service provider providing inbound/outbound call services to its SIP end users.

We would like to comply and be registered with the Robocall Mitigation Program.

We have taken the following measurements, to prevent Robocall traffic:

1. Making sure end-customers know and are well-aware that Fraud / SPAM / any other illegal activities - are strictly prohibited.
2. Each account is being manually setup by Avtal LTD, no automatic registration allowed, making sure all entities have a real valid person behind and are known to Avtal LTD.
3. CallerID is being manually allowed and set by Avtal LTD for each endpoint, and not before end-customers had transferred the relevant DID under our systems, thus making sure they do own the number and have the legal right to use it. Any try to dial with a different CallerID than allowed is automatically blocked.
4. Avtal LTD manages its own billing system, and able to monitor unusual behaviour by end-customers.
5. Accounts and/or endpoints are being blocked by Avtal LTD's support team if any unusual or illegal behaviour is being detected, and investigations are carried, while not allowing any use of our VoIP services until situation has been cleared - both technically and personally with the end-customers.

For any further questions or clarifications, please let us know.
