

Tools and Techniques within an RMP:

Blocklists:

Calls allowed only with verify DID. Other than those DID's calls are rejected.

Calls to and from numbers on the blocklist are automatically blocked in VICI DIAL

Caller ID Reputation:

This approach attributes a reputation (positive, neutral, or negative) to phone numbers is been facilitated by upstream provider.

Upstream gateway give facility helps and inform decision-making about whether to answer incoming calls or initiate outgoing calls.

Audio Fingerprinting (Advanced):

Beyond blocklists, audio fingerprinting analyzes call audio content. (provided by upstream carrier)

It identifies patterns associated with robocalls, even if the phone number changes. (provided by upstream carrier)

RoboKiller Enterprise uses audio fingerprinting to enhance protection. (provided by upstream carrier)
