

Robocall Mitigation Policy

Robocall Mitigation Compliance with TRACED Act

Objective: Establish and follow a policy that is compliant with TRACED Act

I. Overview

The FCC requires that all providers certify in the Robocall Mitigation Database their status for compliance with STIR/SHAKEN. Those not yet fully compliant must implement and certify to the implementation of a Robocall Mitigation Plan to ensure that this illegal traffic does not originate on their networks as they work within the industry to become fully compliant.

The Commission requires voice service providers to develop a Robocall Mitigation Plan that:

- details the reasonable steps taken to avoid originating illegal robocalls
- demonstrates a commitment to respond to traceback requests to cooperate with investigating and stopping illegal robocalls
- is filed in the Robocall Mitigation Database.

This mitigation plan is submitted on behalf of Generation 3 Managed IT, a reseller of VoIP services to commercial entities. Generation 3 Managed IT serves the southeastern United States and can provide services nationally.

G3MIT is a reseller of services from our trusted partner, SkySwitch, who has implemented STIR/SHAKEN in all parts of its network.

II. General Prohibition Against Illegal Robocalling

G3MIT end user services are subject to restrictions contained in its published legal notices and all executed services orders include the requirement that service is provided pursuant to its terms of service ("TOS") requirements.

Its existing TOS prohibit activities normally associated with Robocalling including, but not limited to:

- providing altered, deceptive, or false information about the identity of the sender or the origin of a message or phone call;
- violating any applicable local, state, or federal law; using the G3MIT service to engage in or in connection with fraudulent activities

In addition, the company is updating its TOS to expressly reference the prohibition on robocalling and all current subscribers will receive notice of the publication of its updated TOS.

G3MIT's end users are notified that G3MIT may take action up to suspension or termination of service for violation of the TOS.

III. Know Your Customer

G3MIT utilizes the mitigation technique of "Know Your Customer." G3MIT is a small long established provider that maintains a close relationship with its subscribers. Its customers are generally "mom and pop" users and few of its total customer base have enough call paths to generate the high volume of traffic associated with robocalling allowing us to use targeted in-house analytics to monitor, alert and apprehend suspected robocalling activities.

G3MIT has set a call path level based on its average customer size. The level – referred to as "large volume calling capability" – is subject to change.

G3MIT has a screening for new customers requesting service at or above large volume calling capability levels:

- We will not deploy large volume calling capability as a residential service or at an address shown in the company records as being residential
- Businesses requesting large volume calling capability must provide a tax ID and verification as to the nature of the business
- We verify addresses to look for overlapping / multiple deployed voice path subscriptions
- A G3MIT representative may visit the premise of the business to verify the number of users at the location is appropriate for the volume of calling

G3MIT serves a small number of long-time business end users with large volume calling capability that are being directly contacted to review with them G3MIT's policies and efforts to prevent the G3MIT network from being used for illegal robocalling.

IV. Network Monitoring

G3MIT is using all the available resources from our upstream provider to continually monitor and flag call patterns indicative of potential illegal robocalling.

V. Traceback and Enforcement Cooperation

G3MIT will actively cooperate with the traceback community including the FCC, law enforcement, and The Industry Traceback Group (ITG) to investigate and stop illegal robocalls. G3MIT will dedicate sufficient resources to provide prompt and complete responses to traceback requests.
