

Robocall Mitigation Program Description

1. Overview:

Ubunet acknowledges that we are not obligated to implement STIR/SHAKEN as we do not operate a gateway in the United States. We route all our international traffic through a U.S.-based gateway provider, which is responsible for STIR/SHAKEN compliance.

2. Mitigation Policies:

Despite not being obligated, Ubunet has implemented several policies aimed at preventing the origination, carrying, or processing of illegal robocalls. These include:

- Monitoring call traffic for suspicious patterns.
- Blocking known illegal numbers where applicable.
- Maintaining a list of flagged sources.

3. Response Procedures:

While we are not mandated to respond to traceback requests, Ubunet commits to cooperating with the Commission, law enforcement, and the industry traceback consortium. We have protocols in place to address relevant inquiries and assist in investigations related to illegal robocalls.

4. Collaboration:

Ubunet values collaboration with our U.S.-based gateway partner and other relevant entities to share information and best practices in the fight against illegal robocalls.

5. Commitment:

Ubunet is dedicated to maintaining high ethical standards and protecting consumers from unwanted robocalls, even though we are not required to implement STIR/SHAKEN.
