

Robocall Mitigation Plan

Rayvion, LLC, DBA Associate Partners, acts as a resale agent that offers voice services provided by Alianza and ClearlyIP to our broadband operator customers. Our broadband operator customers resell Alianza and ClearlyIP voice services to their end-user subscribers. We market our voice services under the brand names ZCorum and VoiSelect.

We do not have any role in the origination, transport or termination of the voice traffic. We rely on the STIR/SHAKEN Implementation of Alianza and ClearlyIP, including the robocall mitigation policies, procedures, and safeguards they have implemented.

Our broadband operator customers are cable companies, telephone companies, electric utilities, municipalities, and other entities that are providing broadband services to their communities. We know who our broadband operator customers are, and they sign agreements with us for the voice service they purchase through us.

While we do not have any role in the transmission of voice traffic in the call chain, we support efforts to reduce illegal robocalls, and commit to assist however we are able in all traceback requests made by the Industry Traceback Group ("ITG"), law enforcement authorities, and government agencies to investigate and address suspected unlawful robocalls originated by the end-user subscribers of any of our broadband operator customers, and will cooperate fully with Alianza and ClearlyIP on all traceback requests we receive.
