Database Information:

Name: MOCH Robocall Mitigation Database

Description: A comprehensive database designed to reduce the impact of robocalls on consumers within the United States and its territories.

Scope: The database includes information on known robocallers, caller ID spoofing techniques, and other relevant data to assist call blocking and filtering services.

Data Sources: The database is populated from various sources, including:

Automated call tracing systems
Reports from consumers and law enforcement agencies
Industry collaborations and data sharing initiatives

Data Elements: The database includes the following data elements:

Caller phone numbers

Caller names
Call times and dates

Caller area codes
Robocall type (sales, political, scams)

Caller ID spoofing information

Data Management:

The database is updated regularly with new and updated information. Data is verified and quality-checked to ensure accuracy and reliability.

Data is stored in a secure and compliant manner in accordance with all applicable laws and regulations.

Access to the Database:

The database is accessible to authorized call blocking and filtering service providers in accordance with the FCC's Robocall Mitigation Database Program. Access is subject to the terms and conditions set forth by MOCH Limited Liability Company.

Compliance: This database has been developed in accordance with the latest FCC rules and guidelines for robocall mitigation databases. MOCH Limited Liability is committed to providing a high-quality database that meets the requirements of the FCC and assists in reducing the prevalence of robocalls.
