

Robocall Mitigation Statement

VNet Technologies Inc is a communications provider that offers VoIP services to fewer than 100,000 subscriber lines. VNet Technologies Inc uses Telinta's TeliCore Class 4 & 5 Cloud-Based VoIP switch platform which is pre-integrated with TransNexus, - a leading provider of STIR/SHAKEN solutions for VoIP providers.

VNet Technologies Inc does not sell services to customers who need large amounts of outbound bulk calling. Most of our customers are small businesses. VNet Technologies Inc accesses the PSTN through SIP trunking with providers that have implemented STIR/SHAKEN. Any robo-generated calls will be flagged, and our operations department will be contacted if there is any suspected robocalling. VNet Technologies Inc will promptly investigate all such reports and take the appropriate action to mitigate illegal robocalls.
