

Robocall Mitigation Plan - AMANDA SUEMILLER LLC

1. Overview

AMANDA SUEMILLER LLC manages its own telecom infrastructure and partners with service providers to deliver voice communication services. This document outlines our strategy to identify and prevent the initiation of unlawful robocalls, using methods that do not depend solely on STIR/SHAKEN or traceback capabilities.

2. Call Traffic Oversight

We utilize both internal analytics and carrier-provided monitoring tools to track voice traffic behavior. Indicators such as excessive call volumes or repetitive patterns trigger internal reviews. When suspicious activity is identified, we take action, including rate limiting or blocking specific call streams.

3. Call Filtering and Rate Limiting

Our system integrates call-blocking mechanisms and applies limits on call-per-second (CPS) rates and simultaneous call sessions. These safeguards are designed to protect our network from exploitation by robocallers and other forms of spam or misuse.

4. Client Verification and Restrictions

Before activation, each new client undergoes a thorough vetting process involving identity checks and risk analysis. To reduce potential abuse, accounts are subject to initial limitations on call volume until trust is established. Repeated violations of our terms may lead to suspension or permanent deactivation of service.

Robocall Mitigation Plan - AMANDA SUEMILLER LLC

5. Regulatory Compliance

Although AMANDA SUEMILLER LLC does not directly implement STIR/SHAKEN protocols, our upstream providers digitally sign our calls when applicable. We also assist in traceback investigations whenever feasible. Our approach relies on proactive controls and cooperative mitigation.

6. Enforcement Measures

Any traffic found to be illegal, fraudulent, or abusive will be blocked immediately. Continued infractions may result in account termination. AMANDA SUEMILLER LLC retains the authority to discontinue service to any party violating our policies or industry regulations.
