

Callient Tech Limited - Robocall Mitigation Plan

Callient Tech Limited is a United Kingdom-based VoIP service provider that does not originate calls within the United States and does not operate a facilities-based network in the United States.

The company does not originate calls on its own facilities and does not directly interconnect with U.S. telephone networks.

Our robocall mitigation strategy includes:

1. Accepting only pre-approved customers under strict KYC (Know Your Customer) procedures.
2. Monitoring for unusual call patterns, high call volumes, or other indicators of robocall activity.
3. Suspending or terminating service to customers engaging in suspicious or unlawful activity.
4. Responding to traceback and enforcement requests in a timely manner, typically within 24 hours.
5. Periodically reviewing account activity to detect and prevent potential misuse.

As the company does not originate traffic in the U.S., we are not subject to the STIR/SHAKEN implementation requirement.

We certify that we have implemented this mitigation plan in accordance with FCC 47 CFR § 64.6305.
