

Mitigation Practices

We implement the following measures to mitigate unlawful robocalls:

- All users must agree to our Acceptable Use Policy, which prohibits illegal robocalls.
- We perform manual vetting of clients before allowing access to our system.
- All outbound traffic is monitored and logged to detect suspicious volume patterns.
- If a user violates our terms, access is immediately suspended and investigated.
- We respond promptly to traceback requests from the FCC or law enforcement.
- We do not allow spoofing of caller ID numbers or international robocalling.
