

Robocall Mitigation Plan for Advance Innovative Solutions, Inc.

FCC Filer ID: 837820

FRN: 0037131133

Prepared: 2025 Filing Year

Overview:

Advance Innovative Solutions, Inc. is an interconnected VoIP provider offering outbound SIP-based calling services for enterprise use cases. We do not assign telephone numbers or provide inbound voice services to end users.

STIR/SHAKEN Status:

Advance Innovative Solutions, Inc. does not yet directly implement STIR/SHAKEN call authentication technology. All outbound calls are currently delivered through an upstream SIP trunking provider, which signs calls on our behalf under their own STIR/SHAKEN credentials.

We are actively in the process of obtaining an SPC token and a certificate through the STI-PA and Certification Authorities, with the goal of directly signing our own outbound calls in compliance with FCC requirements.

Mitigation Measures:

- All traffic originates from a secure, controlled platform located in Microsoft Azure (South Central US region).
- No access to our calling platform is provided to third parties or external agents.
- All call campaigns are pre-approved and originate from known internal systems.
- No access to originate arbitrary traffic is available.
- We do not assign or manage telephone numbers and are exempt from NANPA/LNP obligations.
- Our platform enforces strict call volume controls and logs all outbound activity.

Conclusion:

Until full STIR/SHAKEN implementation is complete, Advance Innovative Solutions, Inc. will continue to adhere to these mitigation practices and maintain secure and controlled call origination consistent with FCC guidelines.
