

Robocall Mitigation Plan

Company: ONER Telecom

Date: June 22, 2025

ONER Telecom is a non-U.S. VoIP termination provider that delivers voice traffic to U.S. destinations via trusted upstream carriers. We do not originate calls from end users and do not transmit robocalls or auto-dialed traffic.

Our traffic is carefully monitored to identify and block high-frequency, short-duration, or abnormal calling patterns that may indicate robocall activity. We implement call filtering, block known fraudulent caller IDs, and enforce strict upstream traffic policies.

Although we are not currently STIR/SHAKEN certified, we maintain a proactive robocall mitigation program to ensure that traffic entering the U.S. PSTN meets legal and ethical standards.

This plan is submitted in compliance with FCC RMD requirements.
