

We own pbx's that we provide to clients all over Europe

When someone generates an outgoing call, we collect the DID from a number we provided to them and, in most cases, a number that was purchased from a DID provider.

The client can't make a call if we don't authorize the caller ID ahead.

In few cases the client can originate a call if he didn't purchase a DID from us and in those cases, we manually check the ANI making inbound call to that number.
