Dixie-Net Utilizes FreeSWITCH as its underlying platform.

FreeSWITCH has a basic implementation of STIR/SHAKEN.

STIR-Shaken is a technology for making secure calls by use of SSL certificates and JSON Web Tokens. For a general overview of the framework please search the web for: ATIS, "Signature-based Handling of Asserted Information using Tokens (SHAKEN). Governance Model and Certificate Management",

FreeSWITCH implements STIR (Secure Telephony Identity Revisited) and SHAKEN (Signature-based Handling of Asserted information using toKENs) (RFC8224, RFC8588), with X509 certificate path check (ATIS "Signature-based Handling of Asserted information using toKENs (SHAKEN)", RFC5280 "6. Certification Path Validation").

Thank you

Jerry Windham
President, Dixie-Net, Inc and subsidiaries.

Sincerely,

A handwritten signature in black ink, appearing to read "Jerry Windham", with a stylized flourish at the end.
