

Tight Technologies Inc (FRN 0037464716) is a non-facilities-based VoIP reseller. We rely on our upstream carriers, all of whom fully implement STIR/SHAKEN, and we do not place unauthenticated traffic directly onto the PSTN. We conduct Know Your Customer (KYC) checks on all clients, including identity and business verification, and we monitor traffic for high-volume, short-duration, or sequential calling patterns. Suspicious traffic is reviewed and may be blocked. Customers found to originate illegal robocalls are suspended or terminated immediately. Tight Technologies Inc fully cooperates with traceback requests and remains committed to ongoing compliance with FCC robocall mitigation requirements. I certify that the foregoing statements are true and accurate to the best of my knowledge.
