

Cerberus Development, Inc.
Robocall Mitigation Statement

Date: September 3, 2025

Cerberus Development, Inc. (a reseller for SkySwitch white-label PBX systems) is a registered voice service provider offering SIP-based telephony solutions to a select group of business clients. We are committed to maintaining the integrity of the public telephone network and actively support efforts to eliminate illegal robocalling.

As part of our robocall mitigation program, Cerberus Development Inc. implements the following customer vetting and traffic monitoring procedures:

1. Customer Screening and Onboarding

Prior to provisioning any voice services, Cerberus conducts a thorough review of each prospective client's business operations, call volume expectations, and intended use of telephony services. We do not accept clients engaged in telemarketing, mass outbound campaigns, or any activity associated with robocalling.

2. Acceptable Use Policy Enforcement

All clients are required to agree to our Acceptable Use Policy, which strictly prohibits the use of our services for unsolicited robocalls, spoofed caller ID, or high-volume autodialing. Violations result in immediate suspension or termination of service.

3. Ongoing Monitoring and Traffic Analysis

Cerberus monitors outbound call patterns for anomalies, including excessive call rates, repeated short-duration calls, and calls to known high-risk destinations. Any suspicious activity is investigated promptly and mitigated.

4. Traceback Cooperation

Cerberus Development, Inc. fully cooperates with traceback requests from the FCC, law enforcement, and the Industry Traceback Group. We commit to responding to such requests within 24 hours.

5. STIR/SHAKEN Implementation Status

Due to the scale and technical architecture of our network, full STIR/SHAKEN implementation is not currently feasible. However, we maintain robust mitigation practices as outlined above and continue to evaluate future deployment options.

Cerberus Development, Inc. takes its responsibility as a voice service provider seriously and remains committed to preventing the origination and transmission of illegal robocall traffic.

Signed,

Terry Carter
