Subject: Robocall Mitigation Program – Rogers Technology Solutions

Rogers Technology Solutions is a reseller utilizing SkySwitch for origination and termination services. SkySwitch has certified in the FCC Robocall Mitigation Database and has fully implemented STIR/SHAKEN on its network.

- Calls originating from DIDs purchased through SkySwitch are signed with **Attestation Level A.**
- Calls originating from BYOT (Bring Your Own Telephone numbers) are signed with **Attestation Level B.**
- SkySwitch has implemented real-time call analytics to monitor for unlawful robocalls, including blocking invalid/unallocated caller IDs and investigating suspicious traffic. Accounts found to originate unlawful robocalls are warned or terminated in accordance with SkySwitch policy.

As a reseller, Rogers Technology Solutions does not directly originate calls outside of the SkySwitch platform. We rely on SkySwitch's STIR/SHAKEN implementation and mitigation program to ensure compliance with FCC rules. We also maintain internal policies to verify customer identity, monitor usage, and cooperate with SkySwitch in the prevention of unlawful robocall traffic.

Thank you,

Demetrice Rogers
