Contact Name: Garrett James

Phone Number: 3059160498

Email: garrett@dealmakersacq.com

Certification Type: ☒

I have implemented a robocall mitigation program.

Description of Robocall Mitigation Program

DealMakers OS, LLC provides AI-driven communication tools, including SMS, ringless voicemail (RVM), direct mail, and AI voice calling, to clients for legitimate business outreach across industries such as real estate, solar, and business funding. While STIR/SHAKEN call authentication may not directly apply to every aspect of our service model, we have implemented a robust robocall mitigation program to prevent the origination of unlawful robocalls and ensure strict compliance with federal and state regulations.

Customer Vetting

All clients undergo a strict vetting process before onboarding:

- **Identity verification** – collection of government/business documentation.
 - **Business validation** – review of company legitimacy and industry alignment.
 - **Use case review** – analysis of intended campaigns to confirm compliance with FCC, FTC, and TCPA guidelines.
-

Contractual Obligations

Each client must sign a binding service agreement that explicitly prohibits:

- Use of the platform for unlawful robocalls or spam.
- Misrepresentation, fraudulent campaigns, or deceptive practices.
- Any activity that violates federal or state telecommunications law.

Violation results in immediate suspension and potential permanent termination of service.

Traffic Monitoring

DealMakers OS actively monitors traffic and delivery activity, including:

- Reviewing campaign volumes for unusual spikes.
- Analyzing delivery reports and call records for abnormal behavior.
- Identifying suspicious patterns that could indicate unlawful robocalling.

All flagged activity is immediately investigated. Services may be paused pending resolution.

Traceback Cooperation

DealMakers OS fully cooperates with all traceback requests, including but not limited to:

- The FCC
 - Federal and state law enforcement agencies
 - The Industry Traceback Group (ITG)
-

Caller ID Practices

To maintain transparency and trust, DealMakers OS ensures that all outbound caller IDs and related campaign messaging:

- Clearly and accurately identify the sender.

- Avoid misleading or deceptive labeling.
- Follow FCC best practices and disclosure requirements.
