

Aerius Networks Inc.

Robocall Mitigation Program Description

Company Name: Aerius Networks Inc.

FCC Registration Number (FRN): 0037506201

Filer Role: Voice Service Provider

Point of Contact: David Alezra, President

Email: david@aeriusnetworks.com

1. Overview

Aerius Networks Inc. provides voice services and is committed to preventing the origination and transmission of unlawful robocalls on its network. Our Robocall Mitigation Program complies with FCC requirements under 47 CFR § 64.6305 and complements our deployment of STIR/SHAKEN call authentication.

2. STIR/SHAKEN Implementation

- Deployment: Aerius Networks has implemented the STIR/SHAKEN framework on all IP portions of its network where technically feasible.
- Authentication & Verification: All originating calls are signed with the appropriate attestation level (Full A, Partial B, or Gateway C) based on our verified relationship with the end user. Calls received from other IP carriers are verified, and verification results are passed downstream.

3. Robocall Mitigation Practices

For traffic not subject to STIR/SHAKEN, Aerius employs the following measures:

Know-Your-Customer (KYC):

- Verification of customer identity, including corporate registration, tax ID, and traffic use case.
- Accounts with unverifiable or suspicious details are denied or terminated.

Call Analytics & Monitoring:

- Real-time monitoring of traffic patterns to detect abnormal or unlawful behavior such as high-volume short-duration calls, sequential dialing, or excessive retries.
- Immediate action taken on flagged traffic, including blocking or suspension.

Traceback Cooperation:

- Full cooperation with the USTelecom Industry Traceback Group (ITG).
- Rapid response to traceback and law enforcement requests.

Complaint Handling:

- A dedicated abuse response process investigates complaints from regulators, carriers, or consumers.
- Verified unlawful robocall sources are promptly suspended or terminated.

4. Ongoing Compliance

- Routine audits of customer accounts and call traffic.
- Staff training on FCC robocall regulations.
- Continuous updates to mitigation practices as new regulatory and technical requirements develop.

5. Certification

Aerius Networks Inc. certifies that:

- STIR/SHAKEN has been implemented on all IP portions of our network where feasible.
- A robust robocall mitigation program is in place for all other traffic.
- We respond to all traceback requests and act promptly against unlawful robocall sources.
- We will update this filing if our practices materially change.

Signed:

David Alezra
