

Robocall Mitigation Plan for Kehr Technologies

Purpose

The purpose of this Robocall Mitigation Plan (RMP) is to outline the strategies for mitigating and preventing robocalls and illegal call practices on our network. The plan adheres to the Federal Communications Commission (FCC) regulations, specifically under the TRACED Act and the STIR/SHAKEN framework, which are designed to reduce robocalls and caller ID Spoofing.

Scope

This plan applies to all voice services provided by our organization, including both VoIP and traditional telephone services, that are subject to FCC regulations. The RMP encompasses all activities related to robocall prevention, including the use of authentication systems, call blocking, and consumer notification systems.

Robocall Mitigation Measures

Our organization utilizes Skyswitch for the delivery of telecom services, including VoIP and SIP trunks.

If the circumstances arise, our organization will work directly with our customers and Skyswitch to identify any illegal usage and will work to stop such activities.
