

Robocall Mitigation

We Install VOIP phone systems and have registered all customers with our carrier & the number used for caller ID I am the only person with admin access to phone systems caller ID with stir/shaken so no one can change their assigned caller id.

All customers are independent businesses with either 1 main company number which is registered in the CNAM as well as individual numbers used as private DID's each system has 1 SIP trunk for inbound calls and 1 of 4 shared outbound SIP trunks we normally have 90k to 100k of outbound traffic minutes monthly I also have setup monthly checks for each outbound sip trunk to make sure there are no excessive calls which may fall into the robocall category.
