Re: STIR/SHAKEN Implementation

Tekify Fiber, LLC ("Tekify") is preventing robocalls from originating from our network by restricting the origination of calls to those coming from our own self-managed handsets deployed at customer locations. Our end-user customers are all one of the following types: small businesses; offices; and/or residential locations.

We do not currently provide SIP Trunking or other services that would allow a customer to originate voice traffic from their servers or dialer programs and send that through our network. We also implement a rate-limiting monitoring on outbound calls which will trigger an internal alert if/when a user attempts to exceed a reasonable volume of calls from their phone.

Tekify purchases its PSTN connectivity from carriers who have also implemented STIR/SHAKEN and are now blocking calls coming into our network that are otherwise unauthenticated.

Tekify has implemented STIR/SHAKEN call signing for all outbound calls.

Respectfully Submitted,
