

Robocall Mitigation Program Description

Company Name: Anviora Systems LLC

FCC Registration Number (FRN): 0037773652

Anviora Systems LLC is a voice service provider that originates calls for its customers and relies on upstream voice service providers for call authentication. The company does not operate network facilities capable of implementing full STIR/SHAKEN authentication across all originating traffic and therefore qualifies for partial STIR/SHAKEN implementation pursuant to 47 CFR § 64.6304.

In accordance with 47 CFR § 64.6305(a), the company maintains a robocall mitigation program designed to prevent the origination of illegal robocalls. The program includes customer vetting, monitoring of calling patterns and traffic behavior, application of call analytics, rate limiting, and investigation of suspicious activity.

The company maintains procedures to suspend or terminate service for customers engaged in suspected illegal robocalling or caller ID spoofing. The company commits to responding fully and within 24 hours to traceback requests from the Federal Communications Commission, law enforcement agencies, and the industry traceback consortium, and to cooperate with such entities in investigations related to illegal robocalls.

This robocall mitigation program is reviewed periodically and updated as necessary to ensure ongoing compliance with applicable FCC rules and guidance.
