

Robocall Mitigation Program Description

SkyTel Corporation

Date: January 15, 2026

SkyTel Corporation ("the Provider") operates as an intermediate SIP transit provider and does not originate voice calls to the public. The Provider does not assign telephone numbers and does not provide voice services directly to end users.

The Provider maintains a robocall mitigation program designed to prevent the transmission of illegal robocalls and spoofed calls over its network. The program includes reasonable measures consistent with 47 CFR § 64.6305, including but not limited to customer vetting, traffic monitoring, and contractual prohibitions against illegal robocalls, spoofing, and other unlawful calling practices.

The Provider commits to respond fully and within 24 hours to all traceback requests from the Federal Communications Commission, law enforcement agencies, and the industry traceback consortium, and to cooperate with such entities in investigating and stopping any illegal robocallers that use its service.

The Provider utilizes Session Border Controller infrastructure capable of supporting the STIR/SHAKEN framework. As an intermediate provider, the Provider does not perform originating authentication. The Provider has not implemented STIR/SHAKEN authentication on its network and is not required to do so pursuant to 47 CFR § 64.6301(a), which applies to originating voice service providers.

This robocall mitigation program is reviewed periodically and updated as necessary to ensure ongoing compliance with applicable FCC rules.
