

Robocall Mitigation Program Description

Accelerated Data Works, Inc

1. Provider Overview

Accelerated Data Works (“the Filer”) is a U.S.-based interconnected VoIP service provider operating as a white-label reseller using the SkySwitch communications platform. The Filer does not operate its own switching infrastructure, does not control SIP signaling, and does not directly originate or sign calls at the network level.

All telephone numbers used by the Filer’s customers are provisioned, assigned, and managed through SkySwitch and its underlying carrier partners. The Filer does not permit Bring Your Own Telephone Number (BYOT) service.

2. STIR/SHAKEN Status

The Filer has not implemented the STIR/SHAKEN authentication framework on its own network and therefore certifies pursuant to **47 CFR § 64.6305(a)**.

STIR/SHAKEN authentication for calls originating on the SkySwitch platform is implemented by the Filer’s upstream provider, **PayG, LLC dba SkySwitch**, which has filed its certification in the FCC Robocall Mitigation Database under **RMD Number RMD0002940**. SkySwitch performs call signing and applies appropriate attestation levels for calls originating on its network using telephone numbers provisioned through its platform.

3. Telephone Number Management and Caller ID Practices

- All Direct Inward Dialing (DID) numbers are obtained through SkySwitch and its underlying carriers.
 - Customers are prohibited from spoofing caller ID numbers or presenting unauthorized calling numbers.
 - Calls originating with invalid, unallocated, or unauthorized numbers are not permitted.
 - The Filer does not allow customers to originate calls using numbers they do not have the right to use.
-

4. Robocall Mitigation Measures

The Filer maintains reasonable and effective robocall mitigation measures designed to prevent the origination of illegal robocalls, including but not limited to:

- Monitoring customer activity for signs of illegal or abusive calling behavior

- Prohibiting the use of invalid, unassigned, or spoofed caller ID numbers
 - Investigating reports of suspected illegal robocalling
 - Warning, suspending, or terminating customers found to be originating illegal robocalls
 - Coordinating with SkySwitch and underlying carriers as necessary to identify and stop unlawful traffic
-

5. Traceback Cooperation

The Filer commits to responding fully and within **24 hours** to all traceback requests from:

- The Federal Communications Commission
- Federal or state law enforcement agencies
- The Industry Traceback Group or its authorized representatives

The Filer will cooperate in good faith with traceback investigations and will take prompt corrective action when illegal robocalling activity is identified.

6. Ongoing Compliance

The Filer will maintain and update this robocall mitigation program as required and will update its Robocall Mitigation Database certification if its network configuration, upstream provider relationships, or STIR/SHAKEN implementation status materially changes.

Certification

The Filer certifies that the information provided in this Robocall Mitigation Program Description is accurate and complete to the best of its knowledge and is consistent with applicable FCC rules and regulations.
