

Langistic Networks provides VoIP-based voice services to end users in the United States using SkySwitch as our underlying carrier and platform provider. All outbound calls originated by our customers are routed through SkySwitch and its FCC-registered upstream carriers, which fully implement the STIR/SHAKEN caller ID authentication framework on all IP-based traffic. As a reseller, we do not operate our own switching infrastructure, do not maintain any TDM facilities, and do not inject any unsigned or unauthenticated traffic into the PSTN. All eligible calls are authenticated and signed by our upstream provider(s) prior to entering the public telephone network.

We maintain a comprehensive robocall mitigation program designed to prevent the origination of unlawful robocalls. Our program includes the following measures:

1. ****Customer Vetting and Verification:**** We perform due diligence on all new customers prior to service activation. This includes identity verification, business validation, and assessment of intended calling use cases. We do not activate service for customers who cannot be verified or who present elevated risk of unlawful calling activity.
2. ****Prohibited Use Enforcement:**** We do not permit high-volume telemarketing, mass autodialing, lead generation campaigns, or any form of illegal robocalling on our service. Customers are contractually prohibited from using our services for unlawful or abusive calling practices.
3. ****Traffic Monitoring and Analytics:**** We monitor customer traffic patterns for anomalies, excessive call volumes, short-duration call patterns, or other indicators of potentially unlawful robocalling. If suspicious activity is detected, we investigate promptly and take corrective action, including rate limiting, suspension, or termination of service.
4. ****Traceback Cooperation:**** We fully cooperate with the Industry Traceback Group (ITG) and respond promptly to traceback requests. We maintain internal procedures to ensure timely and accurate responses to traceback inquiries and coordinate with SkySwitch and its upstream carriers as needed.
5. ****Compliance Oversight:**** We maintain internal policies and procedures to ensure ongoing compliance with FCC robocall mitigation requirements. We review our mitigation practices periodically and update them as necessary to align with evolving FCC rules and industry best practices.

Because all outbound calls are authenticated and signed by SkySwitch and its upstream carriers, and because we maintain strict customer vetting, monitoring, and enforcement procedures, Langistic Networks meets all FCC requirements for voice service providers operating under a full STIR/SHAKEN implementation obligation while providing robust robocall mitigation safeguards.
