

Techkon Solutions is a VoIP reseller providing interconnected VoIP service to end users in New York. All PSTN call origination and STIR/SHAKEN signing is performed by our upstream carrier, VoIP.ms.

We verify all customers' identity and billing information before service activation, including valid billing address and email/phone verification. We do not provision service to customers with suspicious or high-risk traffic.

We monitor call traffic for unusual patterns and investigate any suspected misuse. Accounts found to be generating high-risk traffic are suspended.

STIR/SHAKEN implementation is handled by VoIP.ms, while we maintain customer vetting and policies to prevent illegal robocalls.

For any issues or inquiries regarding robocall mitigation, please contact Thomas Kam/President at tkam@techkonsolutions.com.
