

Avacent Consulting Corporation
Robocall Mitigation Program
February 2, 2026

Avacent partners with SkySwitch to provide SIP-based VoIP services to its clients and relies on SkySwitch to support and conform to STIR/SHAKEN. Avacent does not provide SIP trunking and the total number of SIP endpoint subscriptions is under 100 with no high volume clients.

Avacent works directly and in-person with all of its unified communications-as-a-service customers to verify their identity, business purpose, and review their historical call use to ensure compliance.

Avacent will actively cooperate with traceback requests to investigate and stop illegal robocalls.
