

MJM TELECOM CORP

Robocall Mitigation Program Description

FCC Robocall Mitigation Database Certification Statement

Pursuant to the Telephone Robocall Abuse Criminal Enforcement and Deterrence (TRACED) Act and 47 CFR § 64.6305, MJM TELECOM CORP hereby certifies that it has implemented a Robocall Mitigation Program designed to prevent the origination and transmission of illegal robocalls over its network, including services provided under the Atheral VoIP brand.

STIR/SHAKEN Implementation

MJM TELECOM CORP implements STIR/SHAKEN authentication on all IP-based voice traffic where technically feasible. Outbound calls are signed using authorized certificates and assigned appropriate attestation levels based on customer validation. Inbound calls are verified, and failed or suspicious attestations are subject to monitoring or blocking.

Customer Vetting & Risk Assessment

All VoIP customers undergo identity verification, business registration validation, service address confirmation, and intended use-case review prior to activation. High-risk or high-volume customers are subject to enhanced due diligence, including review of consent procedures and traffic projections.

Ongoing Traffic Monitoring

MJM TELECOM CORP utilizes automated and manual traffic monitoring systems to detect abnormal call patterns, volume spikes, short-duration calls, invalid number origination, spoofing attempts, and other indicators of unlawful robocall activity.

Do-Not-Originate Protections

Calls attempting to originate from invalid, unallocated, government, emergency service, or otherwise restricted numbers are blocked and investigated.

Traceback Cooperation

MJM TELECOM CORP fully cooperates with traceback requests from industry consortiums, the FCC, and law enforcement agencies. Traceback responses are prioritized and unlawful traffic is immediately mitigated when identified.

Enforcement & Remediation

Upon detection of suspicious traffic, MJM TELECOM CORP may suspend, restrict, or terminate services. Repeat or confirmed violations result in permanent service termination and potential reporting to regulatory authorities.

Recordkeeping

The company maintains documentation of customer onboarding records, monitoring logs, traceback responses, and enforcement actions in accordance with FCC requirements.

Certification

I certify under penalty of perjury that I am authorized to submit this certification on behalf of MJM TELECOM CORP and that the information contained herein is true and accurate to the best of my knowledge.
