

Aquarius Silver LLC

Robocall Mitigation Program Description

FCC Robocall Mitigation Database Filing

Company Overview

Aquarius Silver LLC is a Mobile Virtual Network Operator (MVNO) that provides wireless voice services to end users within the United States. Aquarius Silver LLC utilizes the network infrastructure of AT&T; through the BlueConnects platform to provide voice services interconnected with the public switched telephone network (PSTN).

Aquarius Silver LLC does not operate its own switching infrastructure or IP voice network and therefore relies on its underlying facilities-based carrier to originate and route voice traffic.

STIR/SHAKEN Caller ID Authentication

Caller ID authentication using the STIR/SHAKEN framework is implemented at the network level by the underlying facilities-based carrier. Aquarius Silver LLC relies on this upstream implementation to authenticate caller identification information associated with voice calls that originate from its subscribers.

Because Aquarius Silver LLC does not control the IP network infrastructure required to implement STIR/SHAKEN, the authentication process occurs within the host carrier network prior to the call entering the broader public switched telephone network.

Robocall Mitigation Measures

Although STIR/SHAKEN authentication is implemented upstream by the host carrier, Aquarius Silver LLC maintains internal policies and procedures designed to prevent the origination of illegal robocalls from its service.

- Verification of customer identity during account activation
- Maintaining subscriber records associated with assigned telephone numbers
- Monitoring network usage for abnormal calling patterns that may indicate potential robocall activity
- Investigating suspicious traffic patterns or customer complaints
- Enforcing acceptable use policies that prohibit illegal robocalls and caller ID spoofing

Permitted Use of Service

Aquarius Silver LLC provides voice service primarily to individual consumers for personal communications and safety-related services. The company does not permit the use of its network for large-scale telemarketing campaigns, bulk automated calling systems, or other forms of illegal robocall

activity.

Traceback Cooperation

Aquarius Silver LLC cooperates with the Federal Communications Commission, law enforcement authorities, and the Industry Traceback Group in responding to traceback requests related to suspected illegal robocall traffic.

The company maintains internal procedures to respond to such requests and commits to responding promptly and within the required timeframes. Aquarius Silver LLC will provide relevant call records or other information available through its upstream carrier partners to assist in identifying and mitigating unlawful robocall activity.

Commitment to Compliance

Through the measures described above and coordination with its underlying carrier partners, Aquarius Silver LLC works to prevent the origination of illegal robocalls and to maintain compliance with the robocall mitigation requirements established under 47 CFR § 64.6305.
