

Canis IT– Robocall Mitigation Program

Canis IT mitigates illegal robocalls by:

- Verifying customer identity prior to service activation
- Monitoring customer traffic for abnormal patterns or high-volume calling
- Enforcing acceptable use policies prohibiting robocalls and caller ID spoofing
- Responding to traceback requests from regulators and industry groups
- Suspending or terminating services for customers engaged in illegal robocalling

Canis IT is a non-facilities-based voice service provider and relies on its upstream carrier (SkySwitch) for STIR/SHAKEN call authentication.

This program is implemented in accordance with 47 CFR § 64.6305.
