

Robocall Mitigation Program

Company: 3SNET TELECOMUNICACOES

We are a Brazilian STFC provider operating as a gateway provider for international voice traffic.

We implement robocall mitigation measures in accordance with FCC requirements, including:

- Validation of caller ID (CLI) to prevent spoofing
- Ensuring that all outbound calls use valid, assigned, and reachable telephone numbers
- Monitoring of traffic for unusual patterns, high volume, or suspicious activity
- Immediate investigation and blocking of any traffic identified as potentially fraudulent or illegal
- Cooperation with partners and authorities to prevent illegal robocalls
- Commitment to respond to traceback requests within 24 hours

We do not knowingly originate or transmit illegal robocalls and take all reasonable steps to prevent such traffic on our network.
