

Lyina LEC LLC
Robocall Mitigation Program Description

Lyina LEC LLC is a facilities based voice service provider in the process of launching operations as a competitive local exchange carrier. At this time, the company is still in the early stages of network deployment and has not yet fully implemented the STIR/SHAKEN authentication framework.

As the network becomes operational and interconnections are established, Lyina LEC LLC intends to fully implement STIR/SHAKEN in accordance with FCC requirements.

In the meantime, Lyina LEC LLC maintains a robocall mitigation program designed to prevent the origination and transmission of illegal robocalls. The company is committed to taking practical and effective steps to monitor and manage traffic on its network. This includes reviewing traffic patterns for unusual activity, taking action when suspicious behavior is identified, and ensuring that any problematic traffic is addressed promptly.

Lyina LEC LLC will also respond to traceback requests from the FCC, law enforcement, and the Industry Traceback Group in a timely manner and will cooperate fully in any investigations related to illegal robocall activity.

The company is committed to complying with all applicable FCC rules, including 47 CFR § 64.6305, and will update its mitigation practices as its network evolves and STIR/SHAKEN is fully implemented.
