

Accudata Service, Inc provides small businesses with VOIP telephone services which use the trunk services provided by SkySwitch, Inc.

SkySwitch provides STIR/SHAKEN compliance for its platform, ensuring that calls are authenticated to prevent spoofing. The protocol involves signing outgoing calls with attestation levels (A, B or C) and verifying incoming calls, meetings. This protects users and ensures trusted call identification.

From the information received from Skyswitch, when a call is verified, we show a letter “V” on the end users display, so they can be assured that the call can be trusted.
