
ROBOCALL MITIGATION PROGRAM

Prepared for FCC Robocall Mitigation Database filing update

Entity	Sipstatus Global LTD
Registered Address	Arch. Makariou III, 33, FRIXOS COURT, Flat/ Office 107 6017 Larnaca, Cyprus
Business Profile	Foreign wholesale / B2B voice carrier operating as a non-gateway intermediate provider; no U.S. retail end users or subscribers.

1. Provider Profile and Scope

Sipstatus Global LTD provides voice services on a wholesale business-to-business basis only. The company does not provide retail voice service to U.S. residential or consumer end users, does not maintain a retail subscriber base in the United States, and does not assign numbers directly to U.S. retail customers. In relation to U.S.-bound traffic, the company operates as a non-gateway intermediate provider and maintains a robocall mitigation program designed to identify, investigate, and stop unlawful traffic.

2. Know Your Customer / Know Your Business Counterparty

Before onboarding a customer or business counterparty, Sipstatus Global LTD performs identity and business verification and reviews contractual documentation, commercial details, and operational information relevant to the services to be provided. The company applies a risk-based approach to customer acceptance and may request additional supporting information where the traffic profile, jurisdiction, routing model, or use case presents elevated fraud or robocall risk.

3. Upstream and Downstream Risk Controls

The company maintains procedures to understand the role of its upstream and downstream business counterparties in the call path. Sipstatus Global LTD evaluates counterparties based on available commercial, technical, and compliance information and may limit, reject, suspend, or terminate interconnection or service where there are indicators of illegal robocalls, spoofing, falsified caller ID information, traceback non-cooperation, or other abuse-related concerns.

4. Traffic Monitoring and Mitigation

Voice traffic carried through the network is monitored by a combination of automated controls and manual review. The company uses near-real-time monitoring, anomaly detection, and operational review by its 24/7 NOC team to identify suspicious patterns, including abusive caller ID behavior, unusual routing patterns, spikes, or other indicators associated with illegal robocalls or related fraud. Where suspicious activity is identified, Sipstatus Global LTD investigates promptly and may block specific caller IDs, block traffic streams, suspend a customer, or terminate the relationship, depending on the severity of the issue and the counterparty's response.

5. Traceback and Cooperation

Sipstatus Global LTD will respond to lawful traceback requests from the Federal Communications Commission, law enforcement authorities, and the registered traceback consortium, and will cooperate in good faith with efforts to investigate and stop illegal robocalling. The company maintains operational processes intended to enable timely retrieval of relevant call detail information and escalation to the appropriate internal personnel.

6. Recordkeeping

The company maintains call detail records and related operational data reasonably necessary to support abuse investigation, traceback, and compliance review, subject to applicable legal and contractual requirements. Relevant records are retained and made available internally for fraud analysis, incident response, and cooperation with competent authorities where required.

7. STIR/SHAKEN and Filing Position

Sipstatus Global LTD is a foreign wholesale / B2B provider and is not filing as a U.S. retail voice service provider. The company does not originate traffic on behalf of U.S. retail subscribers. For this reason, traffic handled by the company is subject to the robocall mitigation controls described in this program, and the company provides this filing and program description in connection with its status as a non-gateway intermediate provider.

8. Enforcement Measures

Where Sipstatus Global LTD determines that a customer or counterparty has originated, transmitted, or facilitated unlawful robocalls, spoofed traffic, or related abusive traffic, the company may take immediate action. Such action may include warning notices, traffic blocking, rate limiting, suspension, termination, contractual enforcement, and refusal of future service.

This document is intended to describe the operational robocall mitigation measures maintained by Sipstatus Global LTD for FCC Robocall Mitigation Database filing purposes.
