

Yoder Wireless, LLC – Robocall Mitigation Plan

About Yoder Wireless, LLC

Yoder Wireless, LLC is formed under the laws of Tennessee and is a registered carrier with the FCC.
FRN ID Number: 0038007704

The company is a Mobile Virtual Network Operator (MVNO) providing single-line cellular service to individual end user subscribers nationwide.

Because Yoder Wireless, LLC relies on third-party carrier networks, it does not control the infrastructure needed to implement the STIR/SHAKEN framework. The company owns no switches, spectrum licenses, or tower space.

Given its service model focused on individual cellular subscribers, the risk of robocalling or high-volume calling activity is extremely low. Devices are single-line, typically incompatible with auto dialers or high-volume short-duration (HVSD) calling tools.

Accordingly, the robocall mitigation program is tailored to reflect the minimal risk level of illegal call origination.

STIR/SHAKEN IMPLEMENTATION

As an MVNO, Yoder Wireless cannot implement STIR/SHAKEN because it does not control the necessary network infrastructure. The company is excluded from the FCC's STIR/SHAKEN implementation obligation under paragraph 40 of the FCC's First Call Authentication Report and Order. Yoder Wireless, LLC depends on its underlying carrier partners, who maintain and operate the infrastructure, to handle STIR/SHAKEN authentication.

ROBOCALL MITIGATION PLAN

Because Yoder Wireless, LLC's service involves only single-line cellular subscribers, robocalling risk is minimal. Nonetheless, the company maintains mitigation procedures to manage potential risks.

KNOW YOUR CUSTOMER – SUBSCRIBER KYC & DUE DILIGENCE

Subscribers enter into a contractual service agreement, agreeing to abide by the company's Terms of Service, Privacy Policy, and Acceptable Use Policy (AUP).

The company reserves the right to suspend or terminate any subscriber who violates these policies or engages in unlawful use of the service.

KNOW YOUR CUSTOMER – ACCEPTABLE USE POLICY (AUP)

All company customers, including end users and wholesale clients, are bound by the company's Acceptable Use Policy prohibiting any fraudulent or unlawful voice traffic.

Yoder Wireless, LLC may immediately suspend or terminate service if it detects suspicious or fraudulent activity.

PREVENTING ILLEGAL ROBOCALLS

As an MVNO, Yoder Wireless, LLC originates calls routed exclusively through its underlying carrier's network, having no direct control over call provisioning.

Underlying Provider: AT&T Wireless

AT&T supplies analytics tools and monitoring systems used to detect and block potentially unlawful calls.

TRACEBACK, INQUIRY & RESPONSE

Yoder Wireless, LLC responds to inquiries from the FCC, law enforcement, ITG, or other agencies within 24 hours. The company cooperates fully to trace and prevent illegal activity, coordinating with its provider to block identified traffic when necessary.

A designated point of contact manages all traceback requests.

COMPANY DECLARATION

Yoder Wireless, LLC, Inc. is **not currently under investigation** and has not been the subject of any regulatory action related to unlawful robocalling or spoofing in the past two years.

The company may update this plan at any time based on business model changes and will promptly upload updates to the Robocall Mitigation Database (RMD).
