Robocall Mitigation Program Description

FRN: 0038252359

Breeze Global LLC is a provider of interconnected VoIP services operating as a reseller. The company relies on upstream carriers for call routing and STIR/SHAKEN implementation.

The company has implemented a robocall mitigation program to prevent illegal robocalls, including customer vetting, traffic monitoring, and enforcement actions. All customers must agree to terms prohibiting illegal robocalling and spoofing.

Breeze Global LLC implements a comprehensive Know Your Customer (KYC) process to verify the identity and legitimacy of all customers prior to service activation.

The company monitors call patterns for unusual activity and investigates complaints. Accounts engaged in suspicious or illegal activity are suspended or terminated.

The company cooperates with industry traceback efforts and responds to requests from the FCC, law enforcement, and traceback consortiums within 24 hours.

This mitigation program is designed to ensure compliance with FCC rules and to prevent the transmission of illegal robocalls.
