Overview

Decisive Data Technology Group (DDTG) is a Texas-based managed services and VoIP provider serving business customers. DDTG is currently in the process of establishing its direct carrier relationships and PSTN origination infrastructure. As a provider without a current STIR/SHAKEN obligation, DDTG has implemented the following robocall mitigation program in accordance with 47 CFR § 64.6305(a).

Exemption Basis

DDTG qualifies for exemption from STIR/SHAKEN implementation requirements under 47 CFR § 64.6305(a) as a voice service provider that has not yet established direct carrier interconnection or its own PSTN origination infrastructure. DDTG currently operates as a reseller under an established carrier partner and has not yet reached the threshold requiring full STIR/SHAKEN implementation. DDTG intends to implement STIR/SHAKEN upon establishing its own direct carrier relationship and PSTN origination infrastructure.

Robocall Mitigation Measures

1. Customer Verification

DDTG verifies the identity of all customers prior to providing voice services through signed service agreements, business verification, and direct account management relationships. Anonymous or unverifiable customers are not served.

2. Know Your Customer (KYC)

DDTG maintains comprehensive records of all customers including business name, registered address, principal contact information, and intended use of services. All customers must agree to acceptable use policies before service activation.

3. Call Traffic Monitoring

DDTG monitors call traffic patterns for anomalies including unusual call volumes, high answer-seizure ratios indicative of robocall campaigns, abnormally short call durations, and other patterns consistent with illegal robocalling activity.

4. Traceback Cooperation

DDTG commits to responding fully and within 24 hours to all traceback requests from the Commission, law enforcement, and the industry traceback consortium (USTelecom). DDTG maintains records

sufficient to support traceback investigations.

5. Contractual Prohibitions

All customer service agreements explicitly prohibit the use of DDTG services for illegal robocalling, caller ID spoofing, or any communications that violate the Telephone Consumer Protection Act (TCPA) or any other applicable law. Customers found in violation will have services immediately suspended or terminated.

6. Response to Illegal Traffic

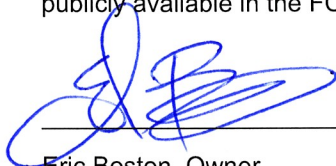

Upon discovery of illegal robocall traffic originating from a customer, DDTG will immediately suspend the offending customer's service, cooperate fully with any investigation, and report the incident to appropriate authorities as required by law.

7. STIR/SHAKEN Implementation Plan

DDTG intends to implement STIR/SHAKEN authentication as it establishes direct carrier relationships and its own PSTN origination infrastructure. Upon establishing these relationships, DDTG will update this filing to reflect its STIR/SHAKEN implementation status.

Certification

I declare under penalty of perjury that the foregoing is accurate and complete to the best of my knowledge and belief. I understand that this Robocall Mitigation Program Description will be made publicly available in the FCC's Robocall Mitigation Database.
