Robocall mitigation steps

State Enterprise “NTEC” has a unique position in the Belarusian telecommunications industry.

By law NTEC acts as an intermediate provider for all international mobile traffic incoming to and outgoing from Belarus, but it neither originates, nor terminates traffic.

In terms of outgoing traffic, including calls to the USA originated from Belarusian mobile networks, NTEC only works with clean retail traffic, which it receives from three Belarusian mobile operators (MTS, A1, life (BeST)) via direct channels.

Seeing as NTEC does not generate its own traffic and only receives it directly from Belarusian mobile operators there are no additional entities, which could possibly generate robocall traffic in-between.

Nevertheless, NTEC puts a lot of effort in analyzing all outgoing traffic utilizing self-written reports based on CDRs from its system. There are several aspects tracked, including but not limited to A-numbers, call duration, call count, SIP-codes, etc., which in turn help track, detect and block any suspicious activity in real-time.

NTEC is committed to promptly respond to all traceback requests from the Commission and cooperate in investigating and stopping any illegal robocallers.

No prior certification has been removed by Commission and NTEC has not been prohibited from filing in the Robocall Mitigation Database by the Commission.
