Business Address: 845 15th Street 3th Floor, San Diego, CA

San Diego CA 92101 _____

Contact Information: info@bridgeburn.online

I. Overview of Mitigation Strategies

BE RAD, INC., is committed to mitigating illegal robocalls and has implemented a comprehensive Robocall Mitigation Program (RMP) that includes the following strategies:

1. Implementation of STIR/SHAKEN Framework:

- Status: BridgeBurn VOIP will implement the STIR/SHAKEN caller ID authentication framework across IP portions of its network.
- Details: All calls originating from our network are authenticated using STIR/SHAKEN, ensuring that caller ID information is verified before calls are completed.

2. Call Analytics and Blocking:

- System: BridgeBurn VOIP employs call analytics to analyses call patterns and identifies potential illegal robocalls based on various criteria, including call volume, call duration, and geographic patterns.
- Blocking: Identified illegal robocalls are blocked. We maintain a dynamic blocking list that is continuously updated based on real-time data and industry best practices.

3. Know-Your-Customer (KYC) Procedures:

- New Customers: BridgeBurn VOIP conducts thorough vetting of all new customers. This includes verifying the identity and business purpose of each customer, as well as reviewing their historical call patterns if they have previously used another provider.
- Existing Customers: We perform regular audits of existing customers to ensure compliance with our terms of service. Any suspicious activity is investigated, and appropriate action is taken, including terminating service if necessary.

4. Customer Education and Support:

- Education: We provide our customers with educational resources about the dangers of illegal robocalls and best practices for avoiding them. This

includes tips on recognizing spoofed numbers and reporting suspicious calls.

- Support: Our customer support team is trained to handle robocall-related inquiries and provides assistance to customers who believe they have received illegal robocalls.

5. Traceback and Cooperation:

- Traceback Requests: As part of our commitment to compliance with the TRACED Act and the Federal Communications Commission (FCC) regulations, BridgeBurn VOIP is fully dedicated to cooperating with industry traceback efforts led by the US Telecom's Industry Traceback Group (ITG).
 - In accordance with FCC rules, BridgeBurn VOIP will respond to all traceback requests initiated by the ITG or any other authorized traceback body **within 24 hours** of receiving the request. This commitment ensures that we actively assist in identifying the source of any illegal or suspicious traffic that may traverse our network, thereby contributing to the reduction of unlawful robocalls.
- Documentation: We maintain detailed records of all traceback requests and our responses, ensuring full accountability and transparency.

II. Specific Measures and Technologies Implemented

1. Caller ID Authentication:

- Technology: STIR/SHAKEN implementation.
- Coverage: 100% of IP-based calls.

2. Customer Vetting:

- New Customers: Comprehensive identity verification, business purpose assessment, and historical call pattern review.
- Existing Customers: Regular audits and monitoring of call activity.

3. Blocking Procedures:

- Dynamic List: Continuously updated blocking list based on real-time data.
- Criteria: High-volume calling patterns, short-duration calls, and known robocallers.

III. Compliance and Reporting

1. Regulatory Compliance:

- BridgeBurn VOIP ensures compliance with all FCC regulations regarding robocall mitigation. Our RMD is designed to meet or exceed the requirements set forth by the FCC.

2. Reporting and Documentation:

- All records related to our robocall mitigation activities are maintained for a minimum of two years and are available for audit upon request.

IV. Commitment to Continuous Improvement

BridgeBurn VOIP is dedicated to continuously improving our Robocall Mitigation Program. We regularly review and update our practices based on new technologies, industry standards, and regulatory requirements. Our goal is to provide the highest level of protection for our customers against illegal robocalls.
