

WOMACK COMMUNICATIONS
Robocall Mitigation Plan
FCC Robocall Mitigation Database

Provider: Womack Communications, LLC **FRN:** 0038463154

Business Address: 2651 S. 5th St. Springfield, IL 62703

Robocall Mitigation Contact: Joshua Womack, President

Telephone: (217) 381-5836 **Email:** support@womackcommunications.com

Underlying Voice Provider: Telnyx

1. Robocall Mitigation Program

Womack Communications maintains a robocall mitigation program designed to prevent its voice services from being used to originate, transmit, or facilitate illegal robocalls, including unlawful caller-ID spoofing and fraudulent or deceptive calling activity.

Womack Communications takes reasonable and effective measures appropriate to its role as a voice service provider, including customer identification and verification, Know Your Customer (KYC) procedures, telephone-number authorization, traffic monitoring, complaint investigation, account enforcement, traceback cooperation, and upstream-provider due diligence.

2. New and Renewing Customers

Womack Communications takes affirmative measures to prevent new and renewing customers from originating illegal robocalls.

Before activation, Womack Communications obtains and reviews information reasonably necessary to identify the customer, establish contact information, understand the customer's intended use of voice services, and assess whether the proposed use presents a risk of illegal robocall activity.

Womack Communications may conduct additional due diligence where circumstances warrant, including reviewing business information, expected calling volume, caller-ID numbers, and authorization to use those numbers.

For renewing and existing customers, Womack Communications may review customer information, traffic patterns, complaints, prior compliance history, and other available information. Customers presenting elevated risk may be subject to additional verification, traffic restrictions, monitoring, suspension, or termination.

3. Know Your Customer and Caller-ID Controls

Womack Communications maintains procedures designed to comply with its KYC obligations under 47 CFR § 64.1200(n)(4). Womack Communications takes reasonable measures to establish that customers are authorized to use telephone numbers presented as originating caller ID. Womack Communications investigates suspected unauthorized caller-ID use, spoofing, fraudulent calling, or other prohibited activity and may restrict traffic, disable numbers, suspend service, or terminate an account when appropriate.

4. Call Analytics and Traffic Monitoring

Womack Communications monitors available customer, account, caller-ID, and traffic information for characteristics reasonably indicative of illegal or abusive calling.

Indicators may include unusually high call volume, sudden traffic increases, large numbers of short-duration calls, repetitive or sequential calling, traffic inconsistent with the customer's stated purpose, significant complaint activity, suspected caller-ID spoofing, and other abnormal traffic patterns.

Womack Communications does not independently contract with a separate third-party robocall analytics vendor as of the date of this filing. Womack Communications utilizes available network-level capabilities provided through its underlying provider, Telnyx, together with Womack Communications' own customer and traffic-monitoring procedures.

If Womack Communications subsequently deploys or contracts for a third-party analytics system used to identify or block illegal traffic, Womack Communication will update its RMD filing as required.

5. Upstream Provider

Womack Communications uses Telnyx as its underlying voice provider.

Womack Communications maintains information sufficient to identify its upstream provider and will exercise reasonable due diligence concerning the provider's compliance with applicable FCC robocall-mitigation requirements.

Womack Communications will cooperate with Telnyx in investigating suspected illegal traffic, responding to traceback requests within a 24-hour period, and implementing appropriate mitigation measures.

6. Investigation and Enforcement

When Womack Communications identifies or receives credible information concerning suspected illegal robocall activity, Womack Communications may investigate the customer and associated traffic, request additional information, restrict or block traffic, disable telephone numbers, suspend or terminate service, notify Telnyx, preserve relevant records, and cooperate with governmental or industry investigations.

Womack Communications prohibits the use of its services for illegal robocalls, fraudulent calling, unlawful caller-ID spoofing, or other unlawful traffic.

7. STIR/SHAKEN

Womack Communications does not currently hold a separate STIR/SHAKEN certification.

Womack Communications utilizes Telnyx as its underlying voice service provider. To the extent STIR/SHAKEN authentication is applicable to calls placed through the Telnyx network, Womack Communications relies on the STIR/SHAKEN capabilities and processes provided by its underlying provider.

Womack Communications will provide accurate customer, telephone-number, and authorization information to its underlying provider as necessary to support applicable caller-ID authentication requirements.

Womack Communications will not knowingly manipulate, circumvent, or misuse STIR/SHAKEN authentication or caller-ID information for the purpose of facilitating illegal robocalls or unlawful spoofing.

8. Traceback and Regulatory Cooperation

Womack Communications commits to respond fully and within 24 hours to all traceback requests from the Federal Communications Commission, law enforcement, and the industry traceback consortium. Womack Communications will cooperate with these entities in investigating and stopping persons or entities using Womack Communications' services to transmit illegal robocalls. Womack Communications will also cooperate with Telnyx and other providers when necessary to complete a traceback.

9. Program Review

Womack Communications will periodically review this program and update its procedures as necessary to reflect changes in its customers, network arrangements, technology, applicable FCC requirements, and robocall mitigation practices.

CERTIFICATION

I, Joshua Womack, President of Womack Communications, am authorized to make this filing and certify that the information contained in this Robocall Mitigation Plan is true and correct to the best of my knowledge, information, and belief.
