

VIABLE WIRELESS INC. ROBOCALL MITIGATION PLAN

d/b/a Cellular Mobile

Version 1 - October 1, 2026

ABOUT VIABLE WIRELESS INC.

Viable Wireless Inc., doing business as Cellular Mobile (the "Company"), is a U.S. mobile virtual network operator (MVNO). The Company provides prepaid mobile voice, messaging, and data service to individual end-user subscribers. The Company does not offer wholesale voice service to downstream carriers or resellers.

FCC Registration Number (FRN): 0034063149

As an MVNO, the Company does not own cellular spectrum, switching facilities, radio access network facilities, or cellular towers. The Company obtains its underlying mobile network service through Atomic Mobile, Inc. and the underlying carrier network used for service delivery. Accordingly, the Company does not control the network facilities required to independently implement the STIR/SHAKEN call-authentication framework.

STIR/SHAKEN IMPLEMENTATION

The Company is a voice service provider in the call chain without its own STIR/SHAKEN implementation obligation because it does not control the facilities or network infrastructure necessary to implement STIR/SHAKEN. The Company relies on Atomic Mobile and the applicable underlying carrier network to perform network-level call authentication and related functions.

The Company will cooperate with Atomic Mobile, the underlying carrier, the Federal Communications Commission (FCC), law enforcement, and the Industry Traceback Group (ITG) in connection with suspected unlawful calls, traceback requests, and call-authentication issues.

ROBOCALL MITIGATION PROGRAM

The Company maintains a robocall mitigation program designed for its business model as a prepaid consumer MVNO. The program is intended to reduce the risk that Company service is used to originate illegal robocalls, unlawful spoofing, fraudulent calling, or other prohibited voice traffic.

The Company does not knowingly permit its service to be used to originate illegal robocalls or other unlawful voice traffic. When the Company receives credible information indicating that a subscriber may be using service unlawfully, the Company will investigate the matter and, as appropriate, restrict, suspend, or terminate the affected service and coordinate with Atomic Mobile and the underlying carrier.

KNOW YOUR CUSTOMER - PREPAID END USERS

The Company serves prepaid retail end users and does not provide wholesale voice service. The Company will collect and maintain subscriber and account information reasonably necessary to establish and administer prepaid wireless service, consistent with applicable law and the Company's customer policies.

Subscribers are required to comply with the Company's terms and applicable acceptable-use requirements. Use of the service for unlawful robocalling, fraudulent calling, unlawful spoofing, or other illegal activity is prohibited. The Company may restrict, suspend, or terminate service when it determines that a subscriber has violated these requirements or when action is reasonably necessary to stop suspected unlawful traffic.

As an Atomic Mobile MVNO customer, the Company will perform end-user vetting consistent with applicable FCC robocall-mitigation requirements and will cooperate with Atomic Mobile in exchanging relevant information concerning suspected unlawful robocalls and traceback requests.

ACCEPTABLE USE AND RESPONSE TO SUSPICIOUS ACTIVITY

The Company prohibits subscribers from using Company service to engage in fraudulent voice activity, illegal robocalling, unlawful telemarketing, unlawful caller-ID spoofing, or other activity prohibited by law or by the Company's service terms.

If suspicious calling activity is identified or reported, the Company will review available account information and coordinate with Atomic Mobile and the underlying carrier as necessary. Depending on the circumstances, the Company may warn the subscriber, restrict calling, suspend service, terminate service, or take other reasonable steps to prevent continued unlawful traffic.

PREVENTING ILLEGAL ROBOCALLS

The Company's retail subscribers originate calls through the mobile network service supplied to the Company through Atomic Mobile. The Company does not operate its own mobile switching network or call-authentication infrastructure. Network-level monitoring, call authentication, blocking, and related carrier functions are therefore performed by Atomic Mobile and/or the applicable underlying carrier.

The Company will use the controls available to it as the retail MVNO, including subscriber account controls, service suspension or termination, customer-policy enforcement, and cooperation with its upstream provider, to mitigate unlawful calling activity.

UPSTREAM / UNDERLYING PROVIDER

The Company's direct wholesale mobile service provider is Atomic Mobile, Inc. Atomic Mobile's Robocall Mitigation Plan states that Atomic relies on AT&T; Wireless as its underlying carrier for service delivery and network infrastructure. The Company will coordinate with Atomic Mobile concerning network-level robocall mitigation, traceback, blocking, and other carrier actions when required.

TRACEBACK, GOVERNMENT INQUIRIES, AND COOPERATION

The Company commits to cooperate in good faith with the FCC, law enforcement, the Industry Traceback Group, Atomic Mobile, and the applicable underlying carrier regarding suspected unlawful robocalling or spoofing.

The Company will respond to traceback requests and other appropriate robocall-mitigation inquiries within 24 hours of receipt, or sooner when reasonably practicable. When a request requires network-level information or action that the Company cannot perform itself, the Company will promptly coordinate with Atomic Mobile and/or the underlying carrier and provide the information available to the Company.

Upon receiving credible notice of suspected illegal traffic associated with a Company subscriber, the Company will investigate the subscriber account, preserve and provide relevant information as legally appropriate, and take reasonable action to prevent continued unlawful use, including restriction, suspension, or termination of service when warranted.

ONGOING REVIEW

The Company will review this Robocall Mitigation Plan as its operations, network relationships, customer base, and applicable regulatory requirements evolve. The Company will update its Robocall Mitigation Database filing and upload a revised plan when required by applicable FCC rules.

COMPANY DECLARATION

Viable Wireless Inc. is committed to preventing its prepaid wireless service from being used to originate unlawful robocalls, unlawful spoofing, or other illegal voice traffic. The Company will maintain reasonable robocall-mitigation practices appropriate to its role as a prepaid retail MVNO and will cooperate with its upstream provider and appropriate governmental and industry traceback authorities.

Prepared for filing in the FCC Robocall Mitigation Database.
