

# MEISIM USA LLC Robocall Mitigation Plan

FRN 0039006754 · 554 S San Vicente Blvd, Suite 108, Los Angeles, CA 90048 · October 20, 2026

---

MEISIM USA LLC takes the reasonable steps below to avoid originating illegal robocall traffic. A person verifies every customer before service, and robocalling and calls without legally required consent are banned. Each line carries one call at a time to US numbers only, abuse is suspended on sight, and traceback requests are answered within 24 hours.

## About MeiSIM USA and its role in the call path

MEISIM USA LLC is a Wyoming limited liability company with its business address in Los Angeles, California. It is wholly owned by Saul Eini and has no subsidiaries or parent company. Other companies under Mr. Eini's control are listed in the filing; none of them provides voice service.

MeiSIM sells US mobile phone lines to approved business customers through an API, mainly for AI applications. Inbound texts reach the customer's webhook or API, and lines with voice place and receive calls over SIP. An outbound call shows one of the customer's own MeiSIM numbers as caller ID; the provider's switch does not let a customer present any other number.

MeiSIM does not operate its own switching network. A call on a MeiSIM line runs:

1. from the customer's SIP client, signed in with a SIP login on MeiSIM's provider's switch,
2. through that switch, operated by Teltik Communications,
3. onto a line on a national US wireless carrier,
4. to the called party, which must be a US number.

Voice is off by default and is turned on for an account only by a person at MeiSIM. Each line carries one call at a time.

MeiSIM also resells travel eSIM data plans and prepaid US phone plans for people's own handsets; the carriers that issue those plans provide the service, on the buyer's own phone. Through its torah613.app brand, MeiSIM runs an invite-only reseller portal for text-only lines, not voice.

## Caller ID authentication (STIR/SHAKEN)

MeiSIM files as a voice service provider without a STIR/SHAKEN implementation obligation, and certifies Option 3. It is unable to implement STIR/SHAKEN due to a lack of control over the network infrastructure (47 CFR § 64.6305(d)(2)(i)). It operates no switch, session border controller or IP network, does not handle call signaling, and holds no SPC token.

Calls on its lines are carried by its provider's switch onto a national US wireless carrier's lines. Every call placed through MeiSIM's API voice service is covered by the robocall mitigation program in this plan.

## **Knowing our customers**

No one gets a MeiSIM API account, key or voice access without a person's review. There is no self-serve signup: each applicant applies on [meisimusa.com](https://meisimusa.com), and a person at MeiSIM reviews the application before any account or key is issued.

Before approving an account, MeiSIM checks:

1. Identity: for a business, its legal name and registration, through its registration documents or the public business registry; for an individual, a government-issued ID.
2. Website and use case: what the applicant is building and what the lines are for.

Before turning on outbound voice, MeiSIM also reviews how the customer obtains the consent the law requires from the people its service will call.

MeiSIM repeats these checks when a customer asks for voice, more lines or higher limits, and at least once a year for every active account. It declines applicants it cannot verify, and any use case built on bulk, marketing or unsolicited calling or texting. From the date of this plan, each application and the evidence checked are kept with the account record.

## **Limits on how lines can be used**

MeiSIM's API terms ([meisimusa.com/api-terms.html](https://meisimusa.com/api-terms.html)), which govern every account, prohibit:

- robocalling, auto-dialling and caller-ID spoofing;
- any call or text that US law requires consent for, made without that consent;
- bulk, marketing, notification or alert traffic of any kind;
- spam, scams, fraud, phishing, harassment, threats and any unlawful content;
- anything that causes a carrier to flag, suspend or disconnect a number.

Calls that use an artificial or AI-generated voice need the called party's prior express consent under the Commission's 2024 ruling (FCC 24-17), so MeiSIM's customers may place them only with that consent.

MeiSIM sets these limits:

- one call at a time per line, and outbound calls to US numbers only;
- a monthly sending allowance for texts on each line, and a daily spending limit per account, both raised only by a person at MeiSIM;
- voice usage prepaid from the account's balance.

## **Monitoring and response**

MeiSIM reviews each account's usage in its billing records against the account's approved use case, and acts at once on abuse it sees or is told about.

- MeiSIM does not run a call-analytics system of its own. Per-call records sit with its provider, so MeiSIM relies on its usage review and on notices from its provider, Teltik Communications, and from carriers.
- It acts on complaints, abuse reports, and notices from its provider, carriers, regulators and law enforcement.
- It does not review call or message content except on an abuse report, a legal requirement, or at the account's request.
- A line or account used in breach of the API terms is suspended as soon as the breach is seen, without notice, and may be closed for good.
- MeiSIM also suspends a line or account when a carrier, a regulator or the law requires it.

## **Knowing our upstream providers**

Some MeiSIM customers are voice service providers themselves, serving their own users. MeiSIM treats each one as an upstream provider:

- Before enabling voice for it, MeiSIM confirms it is listed in the Robocall Mitigation Database.
- MeiSIM re-checks the listing every month and whenever the Commission orders providers removed, and stops the customer's voice service if it is not listed or is removed.
- All traffic it sends is bound by MeiSIM's API terms.

MeiSIM hands calls only to its provider, Teltik Communications (FRN 0026122481), which is listed in the Robocall Mitigation Database. MeiSIM re-checks that listing on the same schedule.

## **Traceback and cooperation**

MeiSIM commits to respond fully and within 24 hours to all traceback requests from the Commission, law enforcement and the industry traceback consortium. It commits to cooperate with them in investigating and stopping any illegal robocallers that use its service to originate calls.

- Contact: Saul Eini, Owner, [Saul@meisimusa.com](mailto:Saul@meisimusa.com).
- Backup: [support@meisimusa.com](mailto:support@meisimusa.com).

MeiSIM answers from its own account and usage records, and requests per-call records from its provider when a request needs them.

## **Enforcement history**

In the two years before this filing, neither MEISIM USA LLC nor any company under common ownership or control has been the subject of a formal Commission, law enforcement or regulatory agency action or investigation with findings of actual or suspected wrongdoing involving illegal robocalls or spoofing, or a deficient Robocall Mitigation Database certification or mitigation program description.

## **Keeping this plan current**

MeiSIM updates its Robocall Mitigation Database filing within 10 business days of any change in the information it contains, and recertifies every year by March 1. Before running its own SIP equipment in the call path, MeiSIM will determine its STIR/SHAKEN obligations for that equipment and obtain an SPC token where they require one. It will then update this plan and its certification.
