Robocall Mitigation Program Description

FCC Registration Number 0039067434 | 27 October 2026

LessTime.ai, LLC is preparing to begin service as a voice service provider. Its existing customer-verification and calling-platform controls support the robocall mitigation program described below.

Customer due diligence

We collect business customers' EINs, verify public registration records, speak with their representatives or owners, and conduct general web searches. We review public information for indicators of foreign registration or undisclosed foreign ownership or control. Where customers or their agents claim licensure, we verify the claimed licenses and service areas against public licensing databases.

Specific robocall mitigation measures

Our calling platform checks contact records entering automated calling for do-not-call, blocked and manual-only status. Consent revocation is preserved against ordinary record updates. Our Terms of Service require compliance with applicable telemarketing, consent and do-not-call obligations and reserve account-suspension rights for violations.

Upstream due diligence and analytics

Prospective wholesale-provider reviews cover provider identity, traffic-acceptance conditions, service terms and signing responsibilities. For enrolled calling numbers, NumberVerifier reputation reports and webhooks provide spam and blocking indicators used to flag and temporarily remove affected numbers from calling rotation. Missing results are not treated as clean results.

Caller ID authentication

LessTime is a new provider and has not implemented STIR/SHAKEN authentication. Its planned provider service has not launched. This description does not claim complete STIR/SHAKEN implementation.

Traceback cooperation

LessTime commits to respond fully within 24 hours of receipt to all traceback requests from the FCC, law enforcement and the industry traceback consortium, and to cooperate in investigating and stopping illegal robocallers using its service.

Maintenance

We will update required RMD information within 10 business days of changes and complete the required annual recertification by March 1. Implementation status and the associated filing must remain consistent with actual operations.
