Connect Telco, LLC
W Russell Rd
Las Vegas, NV 89148
(775)313-0490
www.connecttelco.com

Attention: FCC

As a Small Company we are currently using several methods that secure the requirement fro the Robocall Mitigation Over site.

As a Switchless VoIP Provider we use two CLEC provider which have: 1)Wholesale routing in which we have implemented the Stir Shaken protocol for our Customer site IPPBX systems.; 2) The Enterprise or Retail routing already uses these methods.

Along with the protocols, we at Connect Telco do not allow any customer the ability to have a Robocall system or outbound call center process in place. This is not our market to be in or allow. Along with the outbound access we implemented the inability to allow multiple callouts in a certain given time element which effectively prevents excessive calling patterns.

Along with the Stir Shaken and implementing basic call process prohibiting Call Center capacities we meet the requirements.

Our FRN number: 0036337145

Thank you,

Ernest Spears
